# CART

## Cyber Analytics Reporting Tool for CyberArk®

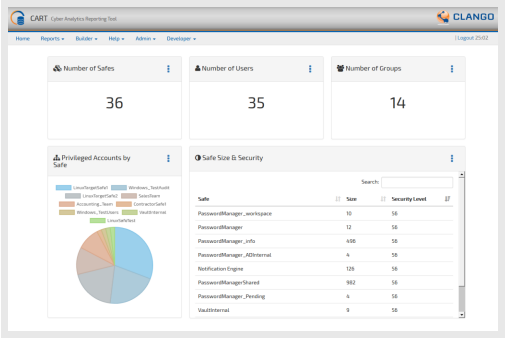
Clango's **Cyber Analytics Reporting Tool (CART)** lets you get the most out of CyberArk with customizable, easy-to-use, reports and visualizations. CART saves time, resources, and money…and eliminates operational, compliance, and auditing headaches.

### Streamlined Reports for:

- ✓ Account Situational Awareness
- ✓ Compliance and Auditing
- ✓ Vulnerability Identification

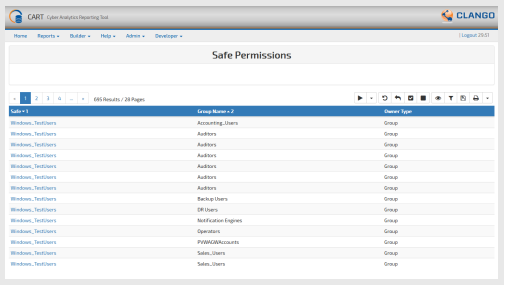
### No More Manual Reporting

- ✓ Customizable, Linked Reports in any Format
- ✓ Intuitive Dashboards
- ✓ Save, Schedule, Generate, and Send Reports



CART is an intuitive, web-based reporting interface that empowers CyberArk users to search, view, prepare, analyze, and report on data that is difficult to access using CyberArk's native tools – all at a fraction of the cost of traditional reporting engines. CART is fully configurable to adapt to your data security policy and role-based access needs.

CART includes 15 predefined, CyberArk-specific reports that cross connect, allowing users to drill down on and roll up data. CART's data discovery templates help users rapidly build additional, fully customizable reports. Stop spending days going back and forth with report writers or making do with unformatted data exports from the CyberArk vault.



Rapid, Convenient Access for Auditors and Compliance Officers. Enable non-CyberArk users with need-to-know fast and simple access to the data they need within the system. Confirm compliance within minutes.

Easy-to-Understand Linked Reports. Quickly and easily use existing reports, build on them, or make completely new reports. Then customize, save, and share personal reports and queries. Save search criteria for future reports and filter by safes, enabling repeatable customized reporting for your enterprise.

Build Personalized Dashboards to Visualize Critical Metrics. CART's hyper-configurable dashboards clearly illustrate critical data, including the number of accounts, number of users, most-accessed accounts, out-of-compliance accounts, recently used accounts, etc.

Sharply Reduce Costs of Manual Reporting Resources. CART's automated reporting allows your organization to re-allocate manual report-writing resources to other parts of the business.

Easily Identify Potential Security Gaps. CART allows you to view changes to data over time that could indicate vulnerabilities. While CyberArk's native functionality only allows snapshots in time, CART archives changes and lets you know critical information for any particular date. CART lets you easily investigate events of non-compliance.
